PROPOSED PROGRAMME FOR 2022

Date	Module	Content
28 Feb, Mon - 5 March, Fri [25 hours]	Introduction to Linux Dr Olivier Sheik Amamuddy	Linux operating system and software installation; Use of Linux and Linux shell commands; Introduction to Bash and Bash scripting; Applications to Bioinformatics problems; High performance computing.
7 March, Mon – 1 April, Fri [80 hours]	Python for Bioinformatics Dr Olivier Sheik Amamuddy	Introductory and advanced Python
4 April, Mon - 8 April, Fri	Python assignment week Dr Olivier Sheik Amamuddy	
14 April, Thurs, 19 April, Tue	Easter Holiday	
11 April, Mon - 13 April, Wed 20 April, Wed – 21 April, Thurs [25 hours]	Basic Genomics Prof Özlem Tastan Bishop	Biological databases; Data retrieval; Sequence alignment and visualization.
22 April, Fri – 29 April, Fri	Study/revision week	

**QUALITY ASSURANCE MANUAL
DEPARTMENT OF BIOCHEMISTRY AND MICROBIOLOGY**

MSc PROGRAMME OUTLINE		
MSc in Bioinformatics and Computational Molecular Biology		
Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

2 May, Mon – 6 May, Fri [25 hours]	Structural Bioinformatics I Prof Özlem Tastan Bishop	Introduction to structural biology; Homology modeling and model validation.
9 May, Mon - 13 May, Fri	EXAMINATIONS: <ul style="list-style-type: none"> • Linux (9 May) • Basic genomics (10 May) • Python (12 May) • Structural Bioinformatics (13 May) 	
16 May, Mon - 20 May, Fri [25 hours]	Structural Bioinformatics II Prof Kevin Lobb	Computational chemistry levels of theory. Protein-small molecule interactions; Ligand docking programs.
23 May, Mon - 27 May, Fri [25 hours]	Structural Bioinformatics III Dr Olivier Sheik Amamuddy	Molecular dynamics simulations of protein-based systems.
24 May, Mon - 28 May, Fri [15 hours]	Structural Bioinformatics IV Dr Olivier Sheik Amamuddy	Residue Network Analysis
30 May, Mon - 3 June, Friday [25 hours]	Statistic Mr Jeremy Baxter	Introductory statistics; R: statistical software.

Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

COURSE OUTCOMES

CRITICAL OUTCOMES ADDRESSED

1. Identify and solve problems and make decisions using critical and creative thinking
2. Work effectively with others as a team
3. Organise and manage time and activities effectively
4. Collect, analyse, organise, and critically evaluate information
5. Communicate effectively using written, electronic and language skills
6. Use science and technology effectively and critically showing responsibility towards the environment and others

7. Demonstrate an understanding of the world as a set of related systems

SPECIFIC OUTCOMES ADDRESSED:

1. Develop a broad understanding of what the field of Bioinformatics and Computational Molecular Biology comprises
2. Develop an in-depth knowledge of certain major areas of Bioinformatics and Computational Molecular Biology
3. Demonstrate the ability to conduct research by designing and carrying out a piece of research in Bioinformatics and Computational Molecular Biology, including design of computational experiments and collection and analysis of data
4. Demonstrate expertise in scientific writing, oral presentation and communication
5. Demonstrate an understanding of the relationship between Bioinformatics and Computational Molecular Biology, the community and the environment
6. Demonstrate the competence required for recognition as a professional Bioinformaticist or Computational Molecular Biologist in South Africa

7. Develop professional attitudes and values including scientific ethics and integrity

PARTICULAR SKILLS TO BE ACQUIRED:

1. Scientific communication and presentation skills including computer skills
2. Ability to use the scientific literature efficiently and effectively
3. Practical skills required for use and application of computers and software
4. Organisational skills required to acquire, manage and utilise data and information
5. Ability to analyse and evaluate scientific data

6. Good computer practice

**QUALITY ASSURANCE MANUAL
DEPARTMENT OF BIOCHEMISTRY AND MICROBIOLOGY**

MSc PROGRAMME OUTLINE		
MSc in Bioinformatics and Computational Molecular Biology		
Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

GENERAL BACKGROUND & OUTCOMES

Bioinformatics and computational molecular biology is the systematic development and application of information technologies and data mining techniques for analysing biological data obtained by experiments, modelling, database searching and instrumentation to make novel observations and predictions about biological function. This course will be taught in an interdisciplinary manner and focussing on the interface between the computational sciences and the biological, physical and chemical sciences. Graduates who complete this course will be skilled in the assimilation of biological information through the use and development of computational tools for a range of applications including simple pattern recognition, molecular modelling for the prediction of structure and function, gene discovery and drug target discovery, the analysis of phylogenetic relationships, whole genome analysis and the comparison of genetic organization.

COURSE STRUCTURE, TEACHING METHODS & APPROACH

The Masters programme will be offered over 11 months and incorporate a number of course work modules and a research project running concurrently throughout the programme. The course work modules will involve an integration of formal lectures, self-learning computer-based tutorials and practicals. In addition, problem solving tutorials would be designed to guide the student through current information-based problems and involve the assimilation and reduction of biological information. A number of the tutorials and practical components will be assessed and contribute towards a course work year mark. The assessment of the course work component would be through assignments, tutorials, tests etc., and examinations. Each examination will have an external examiner, appointed by the lecturer's home Department (for lecturers from Rhodes), or by the Department of Biochemistry, Biotechnology and Microbiology (for external lecturers).

The research projects will be computer based. The projects will be assessed by seminar presentations of the proposed and final work, and by a written thesis. Each thesis will be examined by two external examiners.

**QUALITY ASSURANCE MANUAL
DEPARTMENT OF BIOCHEMISTRY AND MICROBIOLOGY**

MSc PROGRAMME OUTLINE		
MSc in Bioinformatics and Computational Molecular Biology		
Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

ASSESSMENT

OVERALL

The course-work and the research work will each contribute 50% to an overall mark. Successful completion of the course will be subject to a final mark of at least 50%, provided that a candidate obtains at least 50% for the course work, with a sub-minimum of at least 40% from each module, and at least 50% for the project report.

COURSE WORK

The course-work modules will be assessed by internal grading of tutorials, assignments, tests and practicals, etc. to give a class mark; and by internal and external grading of examinations. The calculation of the class mark for each module is given later in this manual under the detailed entry for the module. The examinations will be given during the period specified in the course programme earlier in this manual. For each module, the weighting between class mark and examination towards the module mark will be

- Class mark 40%
- Examinations 60%

The weightings of the various modules in the calculation of the overall course work mark will be proportional to the number of lectures given. For each module the weighting, and the duration of the examination, will be

Module	Duration (hours – up to)
Introduction to Linux	3
Basic Genomics	3
Python for Bioinformatics	4-5
Structural Bioinformatics I	3
Structural Bioinformatics II	3
Structural Bioinformatics III	3
Structural Bioinformatics IV	3
Statistics	3

**QUALITY ASSURANCE MANUAL
DEPARTMENT OF BIOCHEMISTRY AND MICROBIOLOGY**

MSc PROGRAMME OUTLINE		
MSc in Bioinformatics and Computational Molecular Biology		
Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

PROJECT

The project will be graded internally and externally with the following weightings:

- Project proposal and presentation 10%
- Project results and presentations 30%
- Thesis 60%

PROPOSAL:

Guidelines

Preparation for the Research Project Proposal (written and oral) should be commenced as soon as the projects have been allocated.

Written

Style: Follow the style of any journal article on Bioinformatics

Length: Around 20 typed pages. Include sections on: Literature review (around 15 pgs); problem statement and hypothesis (1 pg); aims and objectives (1 page); outline of approach and methodology (1–2 pgs).

References: Follow the citation and listing style of the journal, (references may be single-spaced).

Oral

Length: 30 minutes; 25 minutes presentation and 5 minutes questions.

Dates

As specified in the programme earlier in this manual.

Marks Breakdown

- Proposal presentation: 50%
- Written proposal: 50%

PRESENTATION OF PROJECT RESULTS:

Guidelines

The Research Project Results presentation should include:

- **Introduction** - an explanation of the background to the project, the current status of the scientific field, a clear hypothesis statement, and the overall aims & objectives of the project.
- **Description of the approach**, the techniques and methodology, including reasons for why these computations were done.

**QUALITY ASSURANCE MANUAL
DEPARTMENT OF BIOCHEMISTRY AND MICROBIOLOGY**

MSc PROGRAMME OUTLINE		
MSc in Bioinformatics and Computational Molecular Biology		
Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

- **Presentation and Explanation of Results.**
- **Critical discussion of results** including analysis of their implications, and any problem areas.
- **Conclusion** that includes the overall outcome of the project and where future research should be directed.

Dates

As specified in the programme earlier in this manual.

THESIS:

Structure

There is some flexibility in the choice of format for a thesis, but as a guide, it should contain the following sections in the order given:

Abstract
Table of Contents
Table of Figures
List of Tables
List of Abbreviations
Acknowledgements
Chapters 1 (Literature review)
Chapter 2, 3, etc
Conclusion
References

Each Chapter following Chapter 1 would normally contain

Introduction
Methods
Results and Discussion

Dates

As specified in the programme earlier in this manual.

ASSESSMENT CRITERIA & PROCEDURE

The thesis will be assessed by two external examiners. Preferably, at least one of the external examiners should be international.

NUMBER OF COPIES OF THE RESEARCH REPORT

You should prepare two copies of your thesis for external examiners. After corrections are

**QUALITY ASSURANCE MANUAL
DEPARTMENT OF BIOCHEMISTRY AND MICROBIOLOGY**

MSc PROGRAMME OUTLINE		
MSc in Bioinformatics and Computational Molecular Biology		
Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

done, one final copy should be prepared for RUBi.

DESCRIPTION OF THE MAJOR SECTIONS OF THE THESIS

1. ABSTRACT

An abstract has to stand alone and should: (i) state the principal objectives and scope of the investigation; (ii) state the methodology used; (iii) summarize the results; (iv) state the principal conclusions. It should not exceed a page.

2. CHAPTER 1

Literature review

This should be a concise summary that describes the current status of the research field. It should be current and comprehensive.

Project aims, objectives and motivation

A clear statement of the aims & objectives of the project and motivation for these should be given. Knowledge gap should be explained.

3. FURTHER CHAPTERS

Introduction

This should be a concise summary that describes the current status of the literature related to the chapter.

Methodology

This should give a logical account of the methodology. It should be precise and complete.

Results and Conclusion

This section should give a description of the results of the experiments together with an explanation of why they were done. It should include critical analysis of the data and interpretation of the implications of the results.

4. CONCLUSION

Should be a concise and relevant summary, including the contribution the research makes to the current status of the field. A statement of the direction of future research arising from the project should be given.

Current research articles should be used and cited in the text of the thesis using the style of a bioinformatics journal.

EVALUATION FORMS

MSc Proposal Presentation Evaluation Criteria

Criterion	Weight
1. Concise, accurate & up-to-date literature review	20
2. Knowledge gap and/or problem clearly identified and stated	20
3. Clear research hypothesis & objectives; Concise description of approach and methods	20
4. Research objectives, approach & methods. Realistic? Feasible?	15
5. Time management, visual media and speaker – audience contact	10
6. Ability of speaker to answer questions in a clear & meaningful manner.	15

MSc Written Proposal Evaluation Form

Criterion	Weight
1. Concise, accurate & up-to-date literature review	30
2. Knowledge gap and/or problem clearly identified and stated	20
3. Clear research hypothesis & objectives; Concise description of approach and methods	20
4. Research objectives, approach & methods. Realistic? Feasible?	15
5. Quality of scientific writing	15

PLAGIARISM

Plagiarism is a serious offence. All students are expected to familiarize themselves with the Rhodes University Policy on Plagiarism:

<https://www.ru.ac.za/media/rhodesuniversity/content/institutionalplanning/documents/Plagiarism.pdf>

Before lectures start, each student must sign the plagiarism declaration page and return to the course coordinator.

It is important to understand that in a senior course, a first offence is taken more seriously than in an introductory course.

Student No:

PLAGIARISM DECLARATION FORM

1. I am aware of and I have familiarized myself with the Rhodes University Policy on Plagiarism:
<https://www.ru.ac.za/media/rhodesuniversity/content/institutionalplanning/documents/Plagiarism.pdf>
2. I know that “plagiarism” means using another person’s work and ideas without acknowledgement, and pretending that it is one’s own. I know that plagiarism not only includes verbatim copying, but also the extensive (albeit paraphrased) use of another person’s ideas without acknowledgement. I know that plagiarism covers this sort of use of material found in theses, textbooks, journal articles AND on the internet.
3. I acknowledge and understand that plagiarism is wrong, and that it constitutes academic theft.
4. I understand that my research must be accurately referenced.
5. All the assignments that I submit during my MSc degree are my own work, or the unique work of a group, if a group assignment.
6. I have not allowed, nor will I in the future allow, anyone to copy my work with the intention of passing it off as his or her own work. I also accept that submitting identical work to someone else (a syndicate essay) constitutes a form of plagiarism.

COURSE WORK MODULES

INTRODUCTION TO LINUX

Lecturer: Dr Olivier Sheik Amamuddy

Contact hours: 25

SPECIFIC OUTCOMES ADDRESSED

1. To be able to install a Linux operating system
2. Work comfortably and proficiently in Linux
3. To be able to install and use software in Linux
4. Master several shell programs and use bash scripting

BACKGROUND KNOWLEDGE REQUIRED

Basic computer literacy: proficiency with word-processing, spreadsheets and graphics programs, exposure to standard bench-top computational tools and the web

TEACHING METHODS/APPROACH

The lectures will be complemented by tutorials and self-study

BOOKS & OTHER SOURCES USED

An Introduction to the Linux Command Shell for Beginners by Victor Gedris
GNU/Linux Command-Line Tools Summary by Gareth Anderson
Introduction to Linux – A Hands on Guide by Machtelt Garrels

COURSE CONTENT

1. Overview of Linux
2. Linux installation
3. Basic commands
4. The Linux file system
5. Working with files and folders in Linux
6. I/O redirection
7. Networking and connecting to an external server
8. Fundamental backup systems
9. Software management
10. Overview of Bash and Bash scripting
11. Miscellaneous advanced (e.g. high performance computing)

ASSESSMENT ACTIVITIES AND THEIR WEIGHTS

1. Test 1: 40%
2. Test 2: 60%

PYTHON FOR BIOINFORMATICS

Lecturers: Dr Olivier Sheik Amamuddy

Contact hours: 80

SPECIFIC OUTCOMES ADDRESSED

1. To understand what programming is and why it is useful/necessary
2. To become familiar with the Python syntax and data types
3. To be able to write Python programs to solve basic problems
4. To be able to section off useful bits of code into Python functions
5. To understand and implement object-orientated programming
6. String handling
7. Reading and writing files
8. Useful modules and libraries and how to use them
9. Biological data analysis using Python
10. Handle errors effectively
11. Design and build command line tools with Python that adhere to best practices

BACKGROUND KNOWLEDGE REQUIRED

Basic computer literacy; Basic understanding of the Linux operating system; Understanding of system directories

TEACHING METHODS/APPROACH

Teaching will consist of lectures and numerous small exercises and assignments to allow students to learn from practical experience

BOOKS & OTHER SOURCES USED

Python documentation: <http://docs.python.org/index.html>

Bioinformatics programming using python: Mitchell L model, O'Reilly

SAMs teach yourself python in 24 hours: Kate Cunningham

COURSE CONTENT

1. Introduction to the Python syntax
2. Data types and structures
3. Branching and looping statements
4. Data abstraction with functions and classes
5. File I/O
6. Error handling
7. Building command line applications
8. Miscellaneous modules of interest (e.g. regex, pandas/numpy, plotting)

BASIC GENOMICS

Lecturer: Prof Özlem Tastan Bishop

Contact hours: 25

SPECIFIC OUTCOMES ADDRESSED

1. Become familiar with biological databases
2. Ability to retrieve and analyse data from biological databases
3. Understand various alignment algorithms
4. To be able to align homologous sequences in DNA or protein format and understand the advantages and disadvantages of the two approaches

BACKGROUND KNOWLEDGE REQUIRED

Basic biochemistry and genetics knowledge

TEACHING METHODS/APPROACH

The lectures will be complemented by tutorials, self-study and article discussions

BOOKS & OTHER SOURCES USED

1. Essential Bioinformatics by Jin Xiong
2. Bioinformatics – A practical guide to the analysis of genes and proteins by Andreas Baxevanis and Francis Ouellette
3. Manuals and tutorials of various sequence alignment programs
4. Research articles

COURSE CONTENT

1. Biological databases
2. Homology detection programs
3. Sequence alignment
 - a. Pairwise sequence alignment
 - b. Multiple sequence alignment
 - c. Profiles and HMMs
4. Sequence visualization programs

STRUCTURAL BIOINFORMATICS – I

Lecturer: Prof Özlem Tastan Bishop

Contact hours: 20

SPECIFIC OUTCOMES ADDRESSED

1. To understand structural biology terminology, especially X-ray crystallography
2. To learn how to use different protein visualization programs
3. To understand various secondary and tertiary structure prediction algorithms
4. To understand the range, applications and limitations of modeling methods
5. To learn and understand the various steps involved in homology modeling
6. To learn homology modeling using Modeller
7. To be able to use different model evaluation programs and understand how they work

BACKGROUND KNOWLEDGE REQUIRED

1. Knowledge on biochemical properties of amino acids
2. Basic understanding of primary, secondary, tertiary and quaternary protein structure
3. Knowledge on non-covalent bond formations

TEACHING METHODS/APPROACH

The lectures will be complemented by tutorials, self-study and article discussions

BOOKS & OTHER SOURCES USED

1. Essential Bioinformatics by Jin Xiong
2. Bioinformatics – A practical guide to the analysis of genes and proteins by Andreas Baxeavanis and Francis Ouellette
3. Molecular Modeling and Simulation - An Interdisciplinary Guide by Tamar Schlick
4. Manuals and tutorials of various modeling and visualization programs

COURSE CONTENT

1. Structural biology techniques
2. The Protein Data Bank
3. Protein visualization programs
4. Protein secondary and tertiary structure prediction
5. Homology modeling with Modeller
6. Model validation programs

ASSESSMENT ACTIVITIES AND THEIR WEIGHTS

Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

STRUCTURAL BIOINFORMATICS – II

Lecturer: Dr. Kevin A. Lobb

Contact hours: 25

SPECIFIC OUTCOMES ADDRESSED

This course introduces the theory and practice of molecular modelling as used in chemistry and medicinal chemistry. Although competence in the use of several software packages is a critical component, emphasis will be on the understanding of the methods and on strategies in their application to a wide variety of problems.

BACKGROUND KNOWLEDGE REQUIRED

Little background knowledge is required, beyond that of basic chemistry. However it is essential that you are comfortable with chemical structures and that you can quickly identify whether they are correct or incorrect in terms of positioning and the valency of atoms. Familiarity with the any following concepts would be helpful, though not essential as we will deal with what is necessary during the course. Conformational analysis (e.g. boat and chair cyclohexane); orbitals, HOMO, LUMO, bonding and antibonding, excited state; Infrared Spectroscopy; transition state; activation energy; enthalpy, entropy and free energy.

TEACHING METHODS/APPROACH

The teaching will be split equally between lectures and practicals.

BOOKS & OTHER SOURCES USED

User manuals and background from the programmes Maestro, Gaussian, GAMESS, Autodock, Vega ZZ, KNIME and relevant supplied journal articles.

COURSE CONTENT

Theories used in calculations, molecular mechanics, semi-empirical, Hartree-Fock, configuration interaction and density functional theory. Correlation energy. Basis sets. Strategies for dealing with extremely large systems. Combined methods QM/MM, ONIOM, discrete and continuum solvation. Exploring the potential energy surface and vibrational analysis. Conformational searches. Calculable properties. Excited states. Calculations in vacuo, periodic boundary conditions.

Chemical Libraries. Molecular docking – construction of small molecules, preparation of protein and the docking procedure. Docking via scripting, and high-throughput virtual screening.

ASSESSMENT ACTIVITIES AND THEIR WEIGHTS

There will be an assignment which will make up 100% of the mark for this course.

**QUALITY ASSURANCE MANUAL
DEPARTMENT OF BIOCHEMISTRY AND MICROBIOLOGY**

MSc PROGRAMME OUTLINE		
MSc in Bioinformatics and Computational Molecular Biology		
Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

STRUCTURAL BIOINFORMATICS – III

Lecturer: Dr Olivier Sheik Amamuddy

Contact hours: 25

SPECIFIC OUTCOMES ADDRESSED

This course will introduce the principle of Molecular Dynamics (MD) simulations to study protein systems. This will require a docked protein-ligand complex that would have been generated in the “STRUCTURAL BIOINFORMATICS II” course.

BACKGROUND KNOWLEDGE REQUIRED

This course will require a working knowledge of the linux command line, high performance computing, and a basic understanding of protein biochemistry and atomic interactions.

TEACHING METHODS/APPROACH

This course will be a combination lectures and practicals/tutorials

BOOKS & OTHER SOURCES USED

Reading the user manuals and the tutorials of the programs to be used will be advantageous.

The programs to be used are:

GROMACS

ACPYPE

OpenPBS

COURSE CONTENT

1. The principles of Molecular dynamics simulations of protein-ligand complexes (in GROMACS).
 - i. Structure preparation
 - ii. Solvation
 - iii. Neutralization
 - iv. Energy minimization
 - v. Equilibration
 - vi. Production MD run
2. Trajectory analysis:
 - i. Root Mean Square Deviation
 - ii. Radius of gyration
 - iii. Potential energy
 - iv. Visualization

ASSESSMENT ACTIVITIES AND THEIR WEIGHTS

Assignment 50%

STRUCTURAL BIOINFORMATICS – IV

Lecturer: Dr Olivier Sheik Amamuddy

Contact hours: 15

SPECIFIC OUTCOMES ADDRESSED

Simulating solvated systems of moving particles leads to large and information-rich 3-D data sets that are not always easy to interpret. The field of network analysis is specifically aimed at working with such problems. This course will provide participants with an understanding of residue network analysis and its application in MDM-TASK-web.

BACKGROUND KNOWLEDGE REQUIRED

This course requires successful completion of the Structural Bioinformatics III course and an understanding of protein structure and function.

TEACHING METHODS/APPROACH

This course will be taught by lectures followed by hands on practical sessions.

BOOKS & OTHER SOURCES USED

Research articles pertaining to the methodologies of interest will be presented in class.

COURSE CONTENT

Residue network analysis

1. Introduction to various concepts in network theory
2. Applications of network theory in MDM-TASK-web

ASSESSMENT ACTIVITIES AND THEIR WEIGHTS

Test 50%

Assignment 50%

Course Work / Project Masters	Year: 2022	Coordinators: Prof Özlem Tastan Bishop & Mrs Stacey Glenister

INTRODUCTORY STATISTICS

Lecturer: Mr. Jeremy Baxter

Contact hours: 25

SPECIFIC OUTCOMES ADDRESSED

The aims of this course are:

1. To provide students with the basics of probability theory (probability, probability axioms, conditional probability, probability density function, cumulative distribution function, expectation, variance, discrete random variable, continuous random variable) and statistical background, concepts and techniques (statistical experiment, descriptive statistics, inference statistics) that are most useful to Bioinformaticians.

On completion of the course students should, inter alia, be able to:

1. Explain the differences between a population and a sample.
2. Collect, summarise and describe data using suitable numerical and graphical techniques.
3. Explain the concepts of probability, interpret probabilities and use suitable theory to calculate simple and conditional probabilities.
4. Identify discrete and continuous probability distributions.
5. Demonstrate the use of the binomial, Poisson, normal, Student t, chi-square and F distributions.
6. Calculate point and interval estimates, one- and two-sample, for the population mean(s), proportion(s) and variance(s) and interpret the meaning of each.
7. Perform suitable hypothesis tests (parametric and or non-parametric procedure) for one- and two-sample analyses and draw meaningful conclusions and decisions for the population mean(s), proportion(s) and variance(s).
8. Estimate, interpret and make predictions using linear models. Perform suitable statistical inference and model diagnostics for linear models.

BACKGROUND KNOWLEDGE REQUIRED

1. Basic Calculus: Differentiation and integration
2. Linear algebra: Matrices, vectors
3. Matlab literacy, specifically matrix operations.
4. Basic programming experience, in python or perl

TEACHING METHODS/APPROACH

This course will be taught using formal lectures, typically in the morning, and self-study tutorials and practicals. Use of hand-outs, notes, text books, board-work and overheads. Relevant notions from linear algebra and statistics will be discussed and the student will then be required to read portions of prescribed texts on his/her own. At each lecture a set of exercises will be presented and completed ready for assessment by the next lecture.

BOOKS & OTHER SOURCES USED

1. J Baxter, Introductory Statistics for Bioinformaticians using R (course notes/slides).
2. Wim P. Krijnen, 2009, Applied Statistics for Bioinformatics using R, CRAN

COURSE CONTENT

1. A brief introduction to R.
2. Descriptive statistics (Graphical and numerical summaries of univariate, bivariate and multivariate data).
3. An introduction to statistical distributions.
4. Estimation and inference for one/ two random samples (Parametric and non parametric methods.)
5. An introduction to correlation, linear regression and linear models: (One and Two Way ANOVA)

ASSESSMENT ACTIVITIES AND THEIR WEIGHTS

1. Daily assignments/exercises: 40%
2. Tests: 60%
